

ANTOPIA® BAIT STATION OPERATING INSTRUCTIONS

INNOVATIVE PEST CONTROL PRODUCTS

Fig. 1

- If bait station tab locks are present and engaged (Fig. 1), apply downward pressure with thumb and forefinger to release (see Fig's. 2 & 3). Pull up on the green cover while lock is disengaged to expose the bait reservoir. To engage the lock, align the flat panels of the green cover with the clear cover guides and apply downward pressure until you feel the tab locks engage (Fig. 1).
- Loosen the soil in the spot where you are going to place the station to width of about 3" and a depth of about 7" with a digging implement (a large screwdriver works suitably; Fig. 4).
- Remove foil seal (if present) to expose the pre-filled bait.

Fig. 2

- If not prefilled, remove the **Feeding Float** to fill.
- Twist anchor clockwise into the soil until the entryway is level with the soil (Fig. 5). If you encounter difficulty in seating the bait station properly, remove it and loosen the soil more thoroughly and repeat the anchoring process.
- Alternatively, dig a small hole to a depth of 7" and place the station in the hole, so that the entryway is level with the ground; replace soil and tamp to hold.
- Fill the station with approx. six ounces of liquid ant bait (Fig. 6).
- Place Feeding Float on top of bait (Fig. 7), centering the float in the chamber, aligned with three **Feeding Float** guides.

ANTOPIA® BAIT STATION PLACEMENT INSTRUCTIONS

INNOVATIVE PEST CONTROL PRODUCTS

For best results, place stations in shaded areas or create shade for the bait station. Avoid placing bait station where it will receive direct sunlight whenever possible.

- **For use around structures:**
The number of bait stations to use will vary with the type of ant and the size of the colony.
- **For initial placement:**
Place one bait station every fifty feet around the structure to be treated.
- If any of the bait stations are emptied in less than a week, double the initial placement. Replace baits as needed until feeding activity ceases.

TO REUSE ANTOPIA® 6 BAIT STATION

If less than six months from first use, remove cover and add bait of the same type previously used. If spill resistance is desired, fill station to approximately six fluid ounces.

If more than six months since first use or last cleaning, empty bait station completely, disposing of uneaten bait in accordance with label directions; fill bait station with mild bleach solution (1% chlorine) and allow to sit for at least one hour; empty bait station and dispose of rinsate properly; rinse bait stations several times with water or mild soap and water solution; dispose of rinsate properly and allow station to dry.

Add bait through top fill port to six fluid ounce level; replace fill port cover and place station as directed.
